

Antioxidants in Human Health and Disease (Cabi)

Antioxidants play an important role in the progression of major human degenerative diseases and conditions. This book covers antioxidants and their mechanisms of action; their role in a whole array of conditions including coronary heart disease, malignant disease, diabetes, cataracts, respiratory disease, cystic fibrosis, cognitive functions, and aging; their indicators for oxidative stress; and consumer issues. The majority of chapters have been developed from papers presented at the 6th World Congress in Clinical Nutrition, held in Banff, Canada, July 1997.
