

Diseases and Disorders - Diabetes

Diabetes is a disease without a cure, which affects the way the body uses food for energy. Because diabetes can cause many serious complications, it is the fifth deadliest disease in America today. More than 17 million Americans currently have diabetes. Many are children and young adults, and these numbers are expected to continue to grow. Although the cause of diabetes is a mystery, there are a number of steps people can take to lower their risk of developing diabetes.
